

Amna ben hussien

Software Engineering graduate

0916110094 | amnambh4@gmail.com | Misurata,

PROFILE

A Software Engineering graduate from the Faculty of Information Technology – Misurata University (Class of 2026). Passionate about software development, system design, and information technology. Possessing strong academic knowledge in programming, databases, and software engineering principles, along with active participation in technical events and research activities. Seeking an entry-level opportunity to apply technical skills, grow professionally, and contribute effectively in a dynamic work environment.

EDUCATION

Bachelor's Degree in Software Engineering

Faculty of Information Technology – Misurata University

Graduation Year: 2026

Graduation Project Grade: **95%**

SKILLS

Technical

- Java
- C++
- C#
- Python
- HTML / CSS
- SQL / MySQL

Tools

Microsoft Office (Word, Excel, PowerPoint)

Visual Studio

VS Code

Tools used in graduation project (Data analysis, testing, etc.)

Core Knowledge

- Object-Oriented Programming (OOP)
- Database Design
- Software Development
- Data Handling
- Information Security Basics
- Problem Solving

Soft Skills

- Fast Learner
- Communication
- Teamwork
- Attention to Detail
- Adaptability

RESEARCH & ACTIVITIES

- Participated in a **research paper** at the international conference:
The Horizons of Information Technology Conference (HIT)
- Participated in a **poster presentation** on the World Information Technology Day
- Former **participant and trainer** in Hour of Code
- Former trainee at رواد التقنية camp

TECHNICAL STRENGTHS

- Ability to design and build complete software systems
- Strong analytical and problem-solving thinking
- Writing clean and structured code
- Fast adaptation to new technologies

ADDITIONAL PROJECTS

- Daily Task Management Application
- Small Database System using SQL
- Code Validation / Logic Testing Project

WORK EXPERIENCE

GRADUATION PROJECT

A smart system designed to convert spoken Libyan (Misurata dialect) speech into text and analyze emotions from voice tone. The project combines Automatic Speech Recognition (ASR) and Speech Emotion Recognition (SER) to build a localized intelligent model.

My Role

- Designed and implemented the full system pipeline (audio → text → emotion)
- Preprocessed audio data (cleaning, normalization, feature extraction)
- Worked with speech recognition models (ASR)
- Applied emotion recognition techniques using machine learning
- Performed data labeling and dataset preparation from multiple speakers
- Evaluated model performance using metrics such as Accuracy and F1-score
- Contributed to documentation and research writing

Technologies & Tools:

Python, Machine Learning, Audio Processing, Librosa, Scikit-learn, Speech Models

Project Area:

Artificial Intelligence, Speech Processing, Machine Learning, Data Analysis

PROJECTS PORTFOLIO

- **Speech-to-Text & Emotion Recognition System**

Developed an intelligent system to convert speech into text and detect emotions from voice tone using machine learning techniques.

Technologies: Python, ML, Audio Processing

- **Mall Management System (POS)**

Built a system for managing products, billing, and inventory with barcode support.

Technologies: C#, SQL Server

- **Hospital Management System**

Developed a system to manage patients and doctors data with full CRUD operations.

Technologies: C#, SQL / MySQL

- **Daily Task Management Application**

Created an application to organize tasks and improve productivity.

Technologies: Java / C#

- **Code Validation & Logic Testing**

Developed a project to validate code execution and ensure logical correctness.

LANGUAGES

- Arabic: Native
- English: Fairly good
